Review timeline:

Submission date: 04 August 2017
Editorial Decision: 24 August 2017
Revision received: 17 September 2017
Accepted: 28 September 2017

Editor: Esther Schnapp

Transaction Report:

(Note: With the exception of the correction of typographical or spelling errors that could be a source of ambiguity, letters and reports are not edited. The original formatting of letters and referee reports may not be reflected in this compilation.)

No Peer Review Process File is available with this article, as the authors have chosen not to make the review process public in this case.
In the pink boxes below, please ensure that the answers to the following questions are reported in the manuscript itself.

Any descriptions too long for the figure legend should be included in the methods section and/or with the source data.

This checklist is used to ensure good reporting standards and to improve the reproducibility of published results. These guidelines are established to ensure good reporting standards and to improve the reproducibility of published results. These guidelines are used to ensure good reporting standards and to improve the reproducibility of published results. These guidelines are

Every question should be answered. If the question is not relevant to your research, please write NA (non-applicable).

11. Identify the committee(s) approving the study protocol.

12. Include a statement confirming that informed consent was obtained from all subjects and that the procedures conformed to the principles set out in the Declaration of Helsinki and the Department of Health and Human Services Belmont Report.

13. The publication of patient names, a true statement confirming that consent to publish was obtained.

14. Report any restrictions on the availability or use of human data or samples.

15. Report any restrictions on the availability or use of human data or samples.

16. For phase II and III randomized controlled trials, please refer to the CONSORT flow diagram.

17. Report any restrictions on the availability or use of human data or samples.

18. Provide a “Data Availability” section at the end of the Materials & Methods, listing the accession codes for data generated in this study and deposited in a public repository (e.g., ENA seq data; Gene Expression Omnibus GSE39462, Proteomics data, PRIDE PXD000208). Please refer to our guidelines for “Data Availability”.

19. Computation models that are central and integral to a study should be shared without restrictions and provided in a machine-readable form (SBML, CellML) should be used instead of scripts (e.g., MATLAB). Authors are strongly encouraged to follow the MIRIAM guidelines (see link list at top right) for machine-readable data submission.

20. Access to human clinical and genomic datasets should be provided with as few restrictions as possible while respecting ethical obligations to the patients and relevant medical and legal issues. If practicable, provide and compatible with the individual consent agreement used in the study, the datasets should be deposited in one of the major public access controlled repositories such as DDBJ (http://www.ddbj.nig.ac.jp) or ArrayExpress (http://www.ebi.ac.uk/arrayexpress).

21. Computational models that are central and integral to a study should be shared without restrictions and provided in a machine-readable form (SBML, CellML). Authors are strongly encouraged to follow the MIRIAM guidelines (see link list at top right) for machine-readable data submission.

22. Could your study fall under dual use research of concern?

F - Data Availability

- Data deposition in a public repository is mandatory for:
  - Proteins, CRISPR and CRISPR sequences
  - Microarray data
  - Geneprediction data for small molecules
  - Proteomics and molecular interactions
  - Functional genomics data

- Deposition is highly recommended for any datasets that are central and integral to the study, please consult the journal’s data policy.

- If no structured public repository exists for a given data type, we encourage the provision of unstructured repositories such as Dryad (http://datadryad.org) or Figshare (http://datadryad.org).

- If possible, please refer to our guidelines for “Data Availability”.

G - Dual use research of concern

- If your study falls under dual use research of concern, please check biosecurity documents and confirm whether it is required. Please refer to the US Department of Agriculture and the US Department of Health and Human Services (APHIS/CDC) (see link list at top right). According to our biosecurity guidelines, please provide a statement only if it could.
